# **Charm Fast Phage Test**

for Fecal Indicator in Drinking Water

#### **Product Overview**

**Positive** 

Negative <1 pfu/100 mL

Charm Sciences' EPA Approved Fast Phage test detects coliphage, a viral indicator of fecal contamination in water, in less than 8 hours. With its fast results, Charm® Fast Phage enables municipalities and public health officials to be proactive – providing rapid remediation of vital risks in water supplies and wastewater management.

Current tests for coliphage take 36 - 60 hours for result. Fast Phage takes only 16 hours to confirm results and has an 8-hour predictor for fecal contamination, enabling a same-day public health response.

Complement your bacterial testing. Since 1990, viral contamination has been the source of more than half of all of waterborne illnesses<sup>A</sup>. Bacterial (coliform/E. *coli*) indicator tests for drinking water are blind to viral contamination, so even if water passes bacterial testing, it could still contain viral risk.

\*Occurrence and Monitoring Document for the Final Ground Water Rule, October 2006 http://www.epa.gov/ogwdw/disinfection/gwr/pdfs/support\_gwr\_occurance-monitoring.pdf

#### **Charm Fast Phage Test:**

- ✓ Detects positives in less than 8 hours
- ✓ Confirms negatives in 16 hours
- Augments bacterial testing with viral indicator
- ✓ Contains pre-measured reagents, unit-dosed, and ready-to-use *E. coli* host
- ✓ Delivers clear, easy-to-read fluorescent results

### Simple Procedure<sup>B</sup>

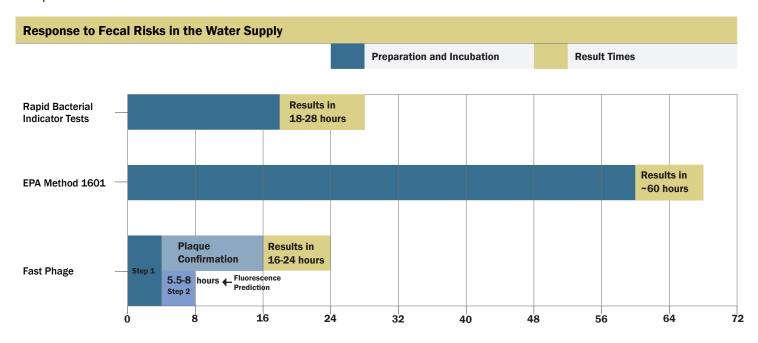

<sup>&</sup>lt;sup>B</sup> For detailed explanation on procedure, please see Operator's Manual

### **Positive Prediction**

Positive coliphage prediction in a working day enables faster response to fecal risks in the water supply and compliments bacterial test results with a viral indicator.

## **Ordering Info**

Order Codes	Each Kit Includes
FP-SOM-25K FP-FPLUS-25K	25 Phage Somatic Presence/Absence Tests 25 Phage F+ Male Specific Coliphage Presence/Absence Tests

See Operator's Manual for additional kits and order codes
