

Charm® ROSA® Beta-lactam 30 Second Test (BL30SEC)

The fastest test to detect beta-lactam antibiotics in bovine milk. Just add milk to the strip, incubate/read in 30 seconds.

For over 40 years, Charm tests have been the trusted test for fast and accurate screening of raw milk. Charm continues their commitment to the dairy industry by providing new innovations that reduce test times and increase dairy sustainability.

Now, you can clear good milk faster than ever—improving efficiency, reducing truck idle times and preventing errors.

Imagine the Possibilities! Factory and On-Farm Use

With a significantly reduced testing time of 30 seconds and a rugged field incubator-reader, the BL30SEC antibiotic test is ideal for unofficial on-farm use. Antibiotic testing of milk on the farm before it is pumped on to the truck makes financial sense to prevent truck and/or pooled milk contamination. It eliminates transportation costs associated with the disposal of a positive tanker.

Speed

The BL30SEC test is a quick and easy test that detects all six beta-lactam drugs.

Simplicity

Add milk to strip and walk away.

That's all—fast, simple antibiotic testing in seconds!

Regulatory Information

Charm BL30SEC test was evaluated with AOAC Research Institute following FDA Center for Veterinary Medicine protocol for beta-lactam screening tests used to test commingled bulk tank cow milk samples. The National Conference of Interstate Milk Shippers evaluated and approved the method for screening beta-lactam drugs according to the requirements of Appendix N in the Pasteurized Milk Ordinance.
